I have found a young Bird. What do I do?

## HOW TO MAKE A FAKE BIRD NEST

### You will need:

- an ice cream container,
- cane basket or hanging basket,
- string,
- newspaper, paper towels or tissues,
- ladder
- scissors.

What to do: If using an ice cream container put some holes in the bottom of the container to allow for drainage. Put two holes on the side at the top of the container. Feed some string through these holes. Line the container with newspaper and paper towels. Attach the container to a tree/shrub near where the bird was found at approx. 2-4m high. Aim for shade and protection. Tree forks offer more stability. The bird may be learning to fly and may not stay in the nest. Observe from a distance and keep cats, dogs and children inside or far away from the nest.
